DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group 2 (claims 17-27) in the reply filed on October 18, 2005 is acknowledged. Applicant did not respond to the election of species with respect to claims 24-27. However, all remaining claims have been examined and the election of species requirement is hereby withdrawn.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 21-23 and 27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 21-23, limitation is not clear. Is it a method of making the corrugated parting line? Please clarify. Claim 27, what is a dipyramid pattern?

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 17-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Inoue et al (5,840,351). Claim 17, Inoue discloses a golf ball comprising a corrugated parting line offset from the equator, which does not intersect or interfere with the dimples edges (fig 3). Claim 18, the dimples create a seamless appearance by appearing on either side of the corrugated parting line. Claim 19, the parting line is offset from the equator by at least 0.1 mm or 0.004 inch. Claim 20, the parting line creates a plurality of peaks and valleys. Claims 21-23, as understood by the examiner, the parting line is a continuous waveform around the equator.

Claims 17, 18, 20-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Solheim (4,653,758). Claim 17, Solheim discloses a golf ball comprising a corrugated parting line, which does not intersect or interfere with the dimples edges (fig 6). Claim 18, the dimples create a seamless appearance by appearing on either side of the corrugated parting line. Claim 20, the parting line creates a plurality of peaks and valleys. Claims 21-23, as understood by the examiner, the parting line is a continuous waveform around the equator.

Claims 17, 18, 20-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Sanchez (5,249,804). Claim 17, Sanchez discloses a golf ball comprising a corrugated parting line, which does not intersect or interfere with the dimples edges (fig 2). Claim 18, the dimples create a seamless appearance by appearing on either side of the corrugated parting line. Claim 20, the parting line creates a plurality of peaks and valleys. Claims 21-23, as understood by the examiner, the parting line is a continuous

waveform around the equator. Claim 24, the dimples create an icosahedron dimple pattern.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 25 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inoue and Solheim (each) in view of Sajima (2002/0019274). The primary references do not disclose an octahedral or cube-octahedral dimple pattern. Sajima teaches a golf ball comprising octahedral or cube-octahedral dimple patterns. One of ordinary skill in the art would modify the dimple pattern for enhanced flight performance.
